Sprint 3 Report

3/4/16

IDEal Team: Chris Kyle, Greg Biles, David Sun, Max Kerscher-Santelli, Kevin McCotter, Cole Lampert

Stop doing:
- We need to stop neglecting our scrum board. Only a few group members actively keep up with it which causes work overlap in some areas.
- Using web2py - no really, we could convert the system to Bottle of Flask for a significantly more effective system.

Start doing:
- We have had good communication, but we could always use more communication where it is necessary.
- Have better utilization of scrum board, for the aforementioned reason.
- Start using github to create error tickets when problems with the system appear so that we can keep better track of them.

Working well:
- Our group meetings have been going well and getting better, more in line with the 10 minute scrum guideline for meeting length
- Group members have gotten better at seeking others working on the same topic and assisting each other with their work.

Work completed:
- The User Interface has been completed and refined. The styles and formatting are present such that new features need only have those styles applied to them to be mostly in line with the current theming.
- File saving and loading to and from the server has been completed
- Downloading a file you are currently working on is functional.

Work not completed:
- The editor is still unable to do code compilation
- We were unable to figure out how to do line or cursor highlighting, so you can't tell where other collaborators are.
